

Foxbot Decals

One of Foxbot's recent decal releases covers two Sukhoi Su-24M Fencers of the Ukrainian Air Force (FD48-029). The aircraft have been painted in the currently trendy digital camouflage, and while the sheets supply all the markings, they left it to the modeller to figure out how to paint this complicated scheme.

Now Foxbot have released two sets of masks to make painting this scheme a far simpler proposition.

Two sheets have been produced for White 20 and White 41. Both are finished in a similar, but not identical scheme, and the accompanying instructions clearly

describe the process of applying this complicated paint scheme.

1/48 SCALE

- FM48-005 Masks Digital Su-24M "White 20" Ukrainian Air Force
- FM48-006 Masks Digital Su-24M "White 41" Ukrainian Air Force

CONCLUSION

These masks will make painting this scheme easier but not simple; time and patience will be the key to reproducing it. But once you have, you will have a model that will be the centrepiece of any collection – a display with a Ukrainian Flanker, Frogfoot, and Fencer, all in a digital scheme, would very impressive. Our thanks to Foxbot for the

samples, which in the UK are available from Hannants.

Decales Global

After 50 years in production, and nearly 10,000 examples built, the Boeing 737 is the world's most numerous airliner. With five examples being delivered every month it is hard to see this changing in my lifetime.

This month from Decales Global we have a selection of 737 decals, covering a number of operators, from national carriers to airlines with only a few examples in service.

I always mention that Decales Global decals have an overall carrier film, and you need to trim the decals from the carrier sheet close to the printed image before applying them to your model.

1/144 SCALE

- DG14118 Boeing 737-800, Westjet C-GJWS
- DG14461 Boeing 737-200, Aero Costa Rica N170PL
- DG14750 Boeing 737-200, Thai Airways, HS-TBD
- DG14780 Boeing 737-200, Batavia Air, PK-YTT
- DG14685 Boeing 737-200, Indian Airlines, VT-EAJ
- DG14886

CONCLUSION

Due to its long life, you can spend the rest of your modelling life building just

1/144 scale Boeing 737s, and still never produce one example from every operator of the type.

Especially as production is likely to continue well into the middle of the 21st century, if you like things colourful, airline schemes are the way to go. As most are produced in 1/144 scale, you can produce quite a large collection without taking up loads of room, and Decals Global supplies markings for airlines that no one else has ever covered before, from all five continents.
